

Definitions

- [Cauchy-Lipschitz Theorem]
- [Characteristic Equations]
 - $\dot{x}^j(s) = \partial_{p_j} F(x(s), z(s), p(s))$
 - $\dot{z}(s) = \sum_j \partial_{p_j} F(x(s), z(s), p(s)) p_j(s)$
 - $\dot{p}_j(s) = -\partial_{x^j} F(x(s), z(s), p(s)) - \partial_z F(x(s), z(s), p(s)) p_j(s)$
- [Noncharacteristic] A triple (x_0, z_0, p_0) where $x_0 \in \Gamma$ and $z_0 = u(x_0)$ is noncharacteristic if $\nabla_p F(x_0, z_0, p_0) \cdot \nu(x_0) \neq 0$

Special Cases

- [Linear] $F(x, u, Du) = b(x) \cdot Du + c(x)u - f$
 - $\dot{x} = b(x)$
 - $\dot{z} = -c(x)z + f$
- [Quasilinear] $F(x, u, Du) = b(x, u) \cdot Du + c(x, u)$
 - $\dot{x} = b(x, z)$
 - $\dot{z} = -c(x, z)$

Theorems

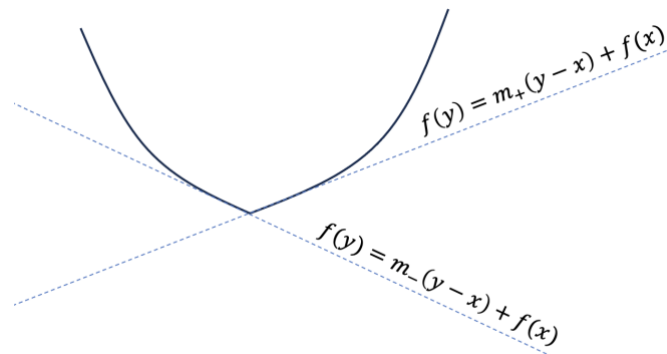

- Let $u \in C^2(U)$ be a solution to $F(x, u, Du) = 0$ in U , where $F \in C^1$. If $x(s)$, which lies in U for $s \in I$, solves ODE $\dot{x}^j(s) = \partial_{p_j} F(x(s), z(s), p(s))$, then $z(s) = u(x(s))$ and $p_j(x(s))$ obey the other two characteristic equations respectively.
- [Implicit Function Theorem] Let $F: \mathbb{R}^d \times \mathbb{R}^n \rightarrow \mathbb{R}^n$ be a C_1 function, and $x_0 \in \mathbb{R}^d, y_0 \in \mathbb{R}^n$ satisfy $F(x_0, y_0) = 0$, $\det \partial_{y^j} F^k(x_0, y_0) \neq 0$. Then exists neighborhoods $U \ni x$ and $V \ni y$ and C^1 function $y: U \rightarrow V$ s.t. $F(x, y(x)) = 0$ and if $(x, y) \in U \times V$ satisfies $F(x, y) = 0$, then $y = y(x)$
- [Inverse Function Theorem]
- [Local Existence Theorem]

Hamilton-Jacobi Equations

Definitions

- [Initial Value Problem] Given Hamiltonian $H: \mathbb{R}^n \rightarrow \mathbb{R}$, initial value function $g: \mathbb{R}^n \rightarrow \mathbb{R}$
 - $u_t + H(\nabla u) = 0$ in $\mathbb{R}^n \times (0, \infty)$
 - $u = g$ on $\mathbb{R}^n \times \{t = 0\}$
- [Lagrangian] The Lagrangian is a smooth function $L: \mathbb{R}_x^n \times \mathbb{R}_v^n \rightarrow \mathbb{R}$
- [Generalised Momentum] $p(s) := D_v L(x(s), v(s))$
- [Hamiltonian] The Hamiltonian H associated with Lagrangian L is:
 - $H(x, p) := p \cdot v(x, p) - L(x, v(x, p))$
 - where $v(x, p)$ is the v such that $p = \nabla_v L(v, x)$
- [Hamilton ODEs]
 - $\dot{x}(s) = \nabla_p H(p(s), x(s))$
 - $\dot{p}(s) = -\nabla_x H(p(s), x(s))$
- [Legendre Transform] Let $L: \mathbb{R}_v^n \rightarrow \mathbb{R}$. The Legendre transform of L is:

$$L^*(p) = \sup_{v \in \mathbb{R}^n} \{p \cdot v - L(v)\}$$
- [Lipschitz Continuous] A function $f: X \rightarrow Y$ is Lipschitz continuous if \exists constant $K \geq 0$ s.t. $\forall x_1, x_2 \in X, d_Y(f(x_1), f(x_2)) \leq K \cdot d_X(x_1, x_2)$
- [Uniformly Convex] A C^2 convex function $H: \mathbb{R}^n \rightarrow \mathbb{R}$ is uniformly convex (with constant $\theta > 0$) if $\xi^T (\nabla^2 H(p)) \xi \geq \theta \|\xi\|_2^2 \forall p, \xi \in \mathbb{R}^n$
- [Semiconcave] A function g is semiconcave if \exists constant C s.t. $g(x+z) - 2g(x) + g(x-z) \leq C\|z\|_2^2$ for all $x, z \in \mathbb{R}^n$.
 - g is semiconcave if and only if the mapping $x \rightarrow g(x) - \frac{C}{2}\|x\|^2$ is concave for some constant C
- [Subdifferential] $m \in \partial f(x)$ if $f(y) \geq m(y-x) + f(x) \forall y \in \mathbb{R}$
 - $\partial f(x)$ collects all the gradients of hyperplanes that supports f at x . In the picture before, $\partial f(x) = [m_-, m_+]$

- f is differentiable at v if and only if $\partial f(v)$ is a singleton
- Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be convex with $\lim_{|v| \rightarrow \infty} \frac{f(v)}{|v|} = +\infty$. Then, f is differentiable on \mathbb{R} if and only if f^* is strictly convex

Results

- [Characteristic Equations]
 - $\dot{x} = \nabla_p H(p)$
 - $\dot{z} = p \cdot \nabla_p H(p) - H(p)$
- [Duality of Hamiltonian and Lagrangian]
 - $H = L^*$
 - $L = H^*$

- $u(x, t) = \inf \left\{ \int_0^t L(\dot{w}(s)) ds + g(w(0)) : w(t) = x \right\}$
- [Hopf-Lax Formula] Let $x \in \mathbb{R}^n$ and $t > 0$. Then the solution $u = u(x, t)$ of minimization problem is $u(x, t) = \min_{y \in \mathbb{R}^n} \left\{ tL\left(\frac{x-y}{t}\right) + g(y) \right\}$
 - This formula provides a reasonable weak solution of initial value problem for Hamilton-Jacobi equation
- [Rademacher] A Lipschitz function is differentiable almost everywhere
- [Finite Propagation Speed]
- [Bump Function] $\phi(x) = \begin{cases} Ce^{-\frac{1}{1-|x|^2}}, & |x| < 1 \\ 0, & |x| \geq 1 \end{cases}$ is infinitely differentiable, compactly supported with vanishing derivatives at $|x| = 1$
- [Properties of Mollifiers]
 - [Smooth] Let T be a distribution, then the sequence $(T_\epsilon)_\epsilon$ by $T_\epsilon = T * \phi_\epsilon$ is a family of smooth functions.
 - [Approximation to Identity] $\lim_{\epsilon \rightarrow 0} T_\epsilon = \lim_{\epsilon \rightarrow 0} T * \phi_\epsilon = T \in \mathcal{D}'(\mathbb{R}^n)$ in the sense of distributions
 - [Support] $\text{supp } T_\epsilon = \text{supp}(T * \phi_\epsilon) \subset \text{supp } T + \text{supp } \phi_\epsilon$
- [Cut-off Functions] χ_B (FIND OUT USE CASES)

Distributions

Definitions

- [Support] Let $f \in C(U)$. The support of f is the closure of subset of U where f is non-zero i.e. $\text{supp } f = \overline{\{x \in U: f(x) \neq 0\}}$
 - [Compactly Supported] If $\text{supp } f$ compact, then f is compactly supported.
- [C_0^∞] The space of all infinitely differentiable functions with compact support.
- [Convolution] Let f be a continuous function in U and $\phi \in C_0^\infty(U)$. Define:
 - $(f * \phi)(x) = \int f(y)\phi(x - y)dy$
- [Convergence of Test Functions] A sequence $\{\phi_n\}_n$ with $\phi_n \in C_0^\infty(U)$ converges to $\phi \in C_0^\infty(U)$ if:
 - [Support] \exists compact $K \subset U$ s.t. $\text{supp } \phi_n, \text{supp } \phi \subset K$
 - [Regularity] $\lim_{n \rightarrow \infty} \sup_{x \in K} \|\nabla^\alpha \phi_n(x) - \nabla^\alpha \phi(x)\| = 0 \quad \forall$ multi-index α
 - i.e. I can find a compact set K containing the support of all functions s.t. there is uniform convergence for any multi-index gradient
 - $\forall \alpha, \forall \epsilon > 0, \exists N$ s.t. $n > N \Rightarrow \|\nabla^\alpha \phi_n(x) - \nabla^\alpha \phi(x)\| < \epsilon \quad \forall x \in U$
- [Distribution] A distribution $u: C_0^\infty(U) \rightarrow \mathbb{R}$ on U is a linear functional that is continuous in the following sense:
 - For any sequence $\{\phi_j\}_j, \phi \in C_0^\infty(U)$ s.t. $\phi_j \rightarrow \phi$, we have $\lim_{j \rightarrow \infty} u(\phi_j) = u(\phi)$
 - [3.8] Equivalent definition: A linear functional $u: C_0^\infty(U) \rightarrow \mathbb{R}$ is a distribution if and only if it is bounded in the following sense: for any compact $K \subset U, \exists N, C_{N,K}$ s.t. $\forall \phi \in C_0^\infty(U)$ with $\text{supp } \phi \subset K, |\langle u, \phi \rangle| \leq C_{N,K} \sum_{|\alpha| \leq N} \sup_{x \in K} |\nabla^\alpha \phi(x)|$
 - i.e. for every compact set, the range of the functional $\langle u, \cdot \rangle$ is bounded by sup of N multi derivatives is bounded
- [$\mathcal{D}'(U)$] $\mathcal{D}'(U)$ is the space of distributions on U
 - $C_0^\infty(U)$ is dense in $\mathcal{D}'(U)$
 - Given $u \in \mathcal{D}'(U)$, construct $u_n = (u\chi_n) * \phi_{\epsilon_n} \in C_0^\infty(U)$
- [Order] Let $u \in \mathcal{D}'(U)$. If $\exists N$ s.t. $\forall K \subset U$ compact, $\exists C_{N,K}$ constant s.t. $|\langle u, \phi \rangle| \leq C_{N,K} \sum_{|\alpha| \leq N} \sup_{x \in K} |\nabla^\alpha \phi(x)|$, then u has order $\leq N$. Order of distribution u is smallest such N .
- [Vanishes] A distribution $u \in \mathcal{D}'(U)$ vanishes in an open subset $V \subset U$ if $\langle u, \phi \rangle = 0$ for every test function ϕ s.t. $\text{supp } \phi \subset V$.
- [Support of Distribution] The support of a distribution $u \in \mathcal{D}'(U)$ is $\text{supp } u = U \setminus V_{\max} = U \setminus \bigcup \{V: V \subset U \text{ open, } u \text{ vanishes in } V\}$
- [$L^1_{\text{loc}}(U)$] A function $u: U \rightarrow \mathbb{R}$ is locally integrable if it is measurable and absolutely integrable on every compact subset K of U with respect to the Lebesgue measure.
 - Absolutely integrable means $\int_K |f| < \infty$
 - Any locally integrable function u defines a distribution by $\langle u, \phi \rangle := \int u\phi \, dx$
 - Any such distribution has order 0
- [Delta Distribution] $\langle \delta_y, \phi \rangle = \phi(y)$
- [Adjoint Method] Let \mathcal{A} be an operator. We can compute the adjoint operator \mathcal{A}' where
 - $\int_U (\mathcal{A}u)\phi \, dx = \int_U u(\mathcal{A}'\phi) \, dx \quad \forall \phi \in C_0^\infty(U), \forall u \in C^\infty(U)$
 - $\langle \mathcal{A}u, \phi \rangle = \langle u, \mathcal{A}'\phi \rangle$
 - If $\mathcal{P}u = \sum_{\alpha: |\alpha| \leq k} a_\alpha(x) \nabla^\alpha u$, then $\mathcal{P}'v = \sum_{\alpha: |\alpha| \leq k} (-1)^{|\alpha|} \nabla^\alpha (a_\alpha v)$
- [Adjoint Convolution] $(f *' \phi)(x) = \int_{\mathbb{R}^d} f(y - x)\phi(y) \, dy = \int_{\mathbb{R}^d} f(y)\phi(x + y) \, dy$
- [Convergence of Distributions] A sequence $(u_n)_n$ converges to u with $u_n, u \in \mathcal{D}'(U)$ if $\lim_{n \rightarrow \infty} \langle u_n, \phi \rangle = \langle u, \phi \rangle \quad \forall \phi \in C_0^\infty(U)$. Write $u_n \rightarrow u$.
 - $u_n \rightarrow u \Rightarrow \partial^\alpha u_n \rightarrow \partial^\alpha u$

- [Approximation Method] Let \mathcal{A} be an operator on $C^\infty(U)$ and $u \in \mathcal{D}'(U)$ and $u_n \rightarrow u$ with $u_n \in C^\infty(U)$. Then, \mathcal{A} can be extended to act on u via $\mathcal{A}u = \lim_{n \rightarrow \infty} \mathcal{A}u_n$
 - i.e. if not sure what is $\langle \mathcal{A}u, \phi \rangle$, find sequence $(u_n)_n \rightarrow u$ and compute $\lim_{n \rightarrow \infty} \langle \mathcal{A}u_n, \phi \rangle$
 - Can take $u_n = (u\chi_n) * \phi_{\frac{1}{n}}$ for example
- [Principal Value Distribution]
- [Fundamental Solution] Let \mathcal{P} be an operator and $y \in \mathbb{R}^d$. The fundamental solution E_y for \mathcal{P} at y is a distribution $E_y \in \mathcal{D}'(U)$ satisfying $\mathcal{P}E_y = \delta_y$.
 - With this, can define $u = \int f(y)E_y(x)dy$ as the integral of point charges
- [Standard Mollifier] The standard mollifier is a smooth function $\phi: \mathbb{R}^n \rightarrow \mathbb{R}$ satisfying:
 - [Compact Support] $\phi \in C_0^\infty(\mathbb{R}^n)$
 - $\int_{\mathbb{R}^n} \phi(x)dx = 1$
 - $\lim_{\epsilon \rightarrow 0} \phi_\epsilon(x) = \lim_{\epsilon \rightarrow 0} \frac{1}{\epsilon^n} \phi\left(\frac{x}{\epsilon}\right) = \delta(x)$
- [Positive Mollifier] A mollifier is positive if $\phi \geq 0$ in \mathbb{R}^n
- [Symmetric Mollifier] A mollifier is symmetric if $\phi(x) = \psi(|x|)$ with $\psi \in C^\infty(\mathbb{R}_+)$
- Mollifier is a smooth function used to create a sequence of smooth functions approximating nonsmooth functions via convolution/
 - Intuitively, sharp features of nonsmooth functions are mollified

Properties

- [Properties of Convolution]
 - [Commutativity] $f * \phi = \phi * f$
 - [Associativity] $(f * g) * h = f * (g * h)$
 - [Support] $\text{supp } f * \phi \subset \text{supp } f + \text{supp } \phi$
 - [Mollification] If one of $f, g \in C_0^\infty(\mathbb{R}^d)$, then $f * g \in C_0^\infty(\mathbb{R}^d)$
 - [Differentiation] $\partial_{x_j}(f * g) = \partial_{x_j}f * g = f * \partial_{x_j}g$ assuming $f, g \in C_0^1(\mathbb{R}^d)$
- [Adjoint Properties]
 - $\langle fu, \phi \rangle = \langle u, f\phi \rangle$ for $f \in C^\infty(U)$
 - $\langle \partial_j u, \phi \rangle = -\langle u, \partial_j \phi \rangle \forall \phi \in C_0^\infty(U)$
 - Every distribution is differentiable
 - $\langle f * u, \phi \rangle = \langle u, f *' \phi \rangle \forall \phi \in C_0^\infty(U)$ where $f \in C_0^\infty(\mathbb{R}^d)$
- [Bump Function] $\psi(r) = e^{-\frac{1}{1-r^2}} \cdot 1\{|r| < 1\}$
- $\phi(x) = \begin{cases} e^{-\frac{1}{x}}, & x > 0 \\ 0, & x \leq 0 \end{cases}$
- [Properties of Mollifiers]
 - $\int \phi_\epsilon dx = 1$
 - Given $f \in L_{\text{loc}}^1(\mathbb{R}^n)$ and $\psi \in C_0(\mathbb{R}^n)$, then $f * \psi$ is continuous
 - Given $f \in L_{\text{loc}}^1(\mathbb{R}^n)$ and $\psi \in C_0^\infty(\mathbb{R}^n)$, $\frac{\partial(f*\psi)}{\partial x_i}(x) = \left(f * \frac{\partial \psi}{\partial x_i}\right)(x)$
 - Given $f \in L_{\text{loc}}^1(\mathbb{R}^n)$ and $\psi \in C_0^\infty(\mathbb{R}^n)$, $f * \psi \in C^\infty(\mathbb{R}^d)$
 - For $f \in L_{\text{loc}}^1(\mathbb{R}^n)$, $\text{supp}(f * \phi_\epsilon) \subset \text{supp}(f) + \overline{B_\epsilon(0)} = \{x + y: x \in \text{supp}(f), y \in \overline{B_\epsilon(0)}\}$ where ϕ_ϵ is the standard mollifier
 - For any function $f \in C(\mathbb{R}^n)$, $f_\epsilon = f * \phi_\epsilon \rightarrow f$ converges uniformly on all compact subsets of \mathbb{R}^n where ϕ_ϵ is the standard mollifier
 - For any $1 \leq p < \infty$, $C_0^\infty(\mathbb{R}^n)$ is dense in $L^p(\mathbb{R}^n)$
 - For any function $f \in L^p(\mathbb{R}^n)$ with $1 \leq p < \infty$, we have $\|f * \phi_\epsilon - f\|_{L^p(\mathbb{R}^n)} \rightarrow 0$ as $\epsilon \rightarrow 0$ where ϕ_ϵ is the standard mollifier
 - If $U \subset \mathbb{R}^n$ open and $K \subset U$ compact, then $\exists \psi \in C_0^\infty(\mathbb{R}^n)$ with $0 \leq \psi \leq 1$ s.t. $\psi = 1$ on a neighbourhood of K

- Given $U \subset \mathbb{R}^n$ open and $f \in L^1_{\text{loc}}(U)$, if $\int_U f \phi \, dx = 0 \, \forall \phi \in C_0^\infty(U)$, then $f = 0$ almost everywhere in U

Propositions

- Any distribution is infinitely differentiable.
- Let $U \subset \mathbb{R}^d$ be open with C^1 boundary. Then $\partial_j 1_U = -(v_{\partial U})_j dS_{\partial U}$ where $dS_{\partial U}$ is the Euclidean surface element on ∂U
- If $u, v \in \mathcal{C}(U)$ with $\langle u, \phi \rangle = \langle v, \phi \rangle \, \forall \phi \in C_0^\infty(U)$, then $u = v$
- $C_0^\infty(U)$ is dense in $\mathcal{D}'(U)$
 - Given any $u \in \mathcal{D}'(U)$, $\exists (u_n)_n \in C_0^\infty(U)$ s.t. $u_n \rightarrow u$ i.e. you can approximate every distribution with “nice” functions
 - For construction, $u_n = (u\chi_n) * \phi_{\epsilon_n} \in C_0^\infty(U)$
 - $\chi_n = 1_{K_n}$ where $(K_n)_n$ compact, $K_n \subset K_{n+1}$ and $\bigcup_n K_n = U$
 - $\langle u_n, \psi \rangle = \langle (u\chi_n) * \phi_{\epsilon_n}, \psi \rangle = \langle u\chi_n, \phi_{\epsilon_n} *' \psi \rangle = \langle u, \chi_n(\phi_{\epsilon_n} *' \psi) \rangle$
- [3.20] Let $\phi \in C_0^\infty(\mathbb{R}^d)$ satisfy $\int_{\mathbb{R}^d} \phi = 1$. For every $\delta > 0$, define $\phi_\delta(x) = \frac{1}{\delta^d} \phi\left(\frac{x}{\delta}\right)$. Then $\phi_\delta * u \rightarrow u$ as $\delta \rightarrow 0$.
- [3.21] Let U be an open set, $u \in \mathcal{D}'(U)$ and $(K_n)_n$ be a sequence of compact subsets of U s.t. $K_n \subset \text{int } K_{n+1}$ and $\bigcup_{n=1}^\infty K_n = U$. Define $\chi_n \in C_0^\infty(U)$ s.t. $\chi_n = 1$ on K_n and $\text{supp } \chi_n \subset \text{int } K_{n+1}$. Let $u_n = \phi_{\delta_n} * (\chi_n u)$, where $\phi_{\delta_n}(x) = \frac{1}{\delta_n^d} \phi\left(\frac{x}{\delta_n}\right)$. Then $u_n \rightarrow u$.
 - $C_0^\infty(U)$ is dense in $\mathcal{D}'(U)$
 - We approximated $u \in \mathcal{D}'(U)$ by smooth and compactly supported functions in $C_0^\infty(U)$
- [3.28] Let $u, v \in \mathcal{D}'(\mathbb{R}^d)$ s.t. at least one of them has compact support, then $u * v$ is well-defined with:
 - $u * v = v * u$
 - $\text{supp}(u * v) \subset \text{supp}(u) + \text{supp}(v)$
 - $\delta_{\{x=0\}} * u = u * \delta_{\{x=0\}} = u$
- [3.30] Let \mathcal{P} be a constant coefficient partial differential operator on \mathbb{R}^d . Let E_0 be a fundamental solution for \mathcal{P} at 0 and f be a compactly supported distribution. Then $u = E_0 * f$ solves $\mathcal{P}u = 0$.
 - If u is a compactly supported distribution, then $u = E_0 * \mathcal{P}u$

Lemmas

- [3.4] Let $f \in C^k(\mathbb{R}^d)$, $k < \infty$. Let ϕ be smooth with $\text{supp } \phi \subset \overline{B(0,1)}$ and $\int_{\mathbb{R}^d} \phi = 1$. Define $\phi_\delta(x) = \frac{1}{\delta^d} \phi\left(\frac{x}{\delta}\right)$ and $f_\delta = \phi_\delta * f$
 - $\text{supp } \phi_\delta \subset \overline{B(0,\delta)}$
 - $f_\delta(x) = \int_{\mathbb{R}^d} \frac{1}{\delta^d} \phi\left(\frac{x-y}{\delta}\right) f(y) dy = \int_{\overline{B(0,1)}} \phi(z) f(x - \delta z) dz$
 - $f_\delta \in C^\infty$, $\text{supp } f_\delta \subset \text{supp } f + B_\delta(0)$
 - Let $|\alpha| \leq k$, then $\partial^\alpha f_\delta \rightarrow \partial^\alpha f$ uniformly on each compact set K as $\delta \rightarrow 0$
 - $\forall \epsilon > 0, \exists D$ s.t. $\delta < D \Rightarrow |\partial^\alpha f_\delta(x) - \partial^\alpha f(x)| < \epsilon \, \forall x \in K$
 - $\limsup_{\delta \rightarrow 0} \sup_{x \in K} |\partial^\alpha f_\delta(x) - \partial^\alpha f(x)| = 0$
- [3.4'] Let $f \in C_0(\mathbb{R}^d)$. Take $\phi_1 \in C_0^\infty(\mathbb{R}^d)$, $\text{supp } \phi_1 \subset \overline{B_1(0)}$ with $\int \phi \, dx = 1$. Define $\phi_\epsilon = \frac{1}{\epsilon^d} \phi\left(\frac{x}{\epsilon}\right)$. Then $f * \phi_\epsilon \rightarrow f$ uniformly.
 - $\int \phi_\epsilon \, dx = 1$
- [3.11] Let $f \in C^\infty(\mathbb{R}^d)$ and $u \in \mathcal{D}'(U)$, then $f * u \in C^\infty(\mathbb{R}^d)$
 - $D^\alpha(f * u)(x) = ((D^\alpha f) * u)(x)$ for any multi-index α
 - $(f * u)(x) = \int f(x-y)u(y)dy = \langle u, f(x-\cdot) \rangle$
- [3.12] Let $f \in C^\infty(\mathbb{R}^d)$ and $u \in \mathcal{D}'(\mathbb{R}^d)$, then $\text{supp}(f * u) \subset \text{supp}(f) + \text{supp}(u)$
- [3.17] If $u_n \rightarrow u$, then $D^\alpha u_n \rightarrow D^\alpha u$

- [3.18] Let $u_n(x) \in L^1_{\text{loc}}(\mathbb{R})$ satisfies $\lim_{n \rightarrow \infty} u_n(x) = u(x)$. If $\exists v \in L^1_{\text{loc}}(\mathbb{R})$ s.t. $|u_n(x)| \leq v(x)$ for almost every $x \in \mathbb{R}$, then $u_n \rightarrow u$.
- [3.19] Let $\phi \in C_0^\infty(\mathbb{R}^d)$ and $\phi_\delta = \frac{1}{\delta^d} \phi\left(\frac{x}{\delta}\right)$. Then $\phi_\delta \rightarrow (\int \phi(x) dx) \delta_0$ as $\delta \rightarrow 0$.
- [3.22] If $u \in \mathcal{D}'(U)$ s.t. $\partial_j u = 0$, then u is a constant
- If $f \in L^1_{\text{loc}}(\mathbb{R}^n)$ and $\psi \in C_0(\mathbb{R}^n)$, then $f * \psi$ is continuous.
- Given an open set U and $f \in L^1_{\text{loc}}(U)$ and $\int_U f \phi dx = 0 \forall \phi \in C_0^\infty(U)$, then $f \equiv 0$ everywhere in U

Theorems

- [3.16, Sequential Compactness] Let $(u_n)_n \in \mathcal{D}'(U)$ be a sequence with the following property: for each $\phi \in C_0^\infty(U)$, the sequence $\langle u_n, \phi \rangle$ converges as $n \rightarrow \infty$. Then $\exists u \in \mathcal{D}'(U)$ characterised by $\langle u, \phi \rangle = \lim_{n \rightarrow \infty} \langle u_n, \phi \rangle \forall \phi \in C_0^\infty(U)$
 - A corollary is that u is automatically continuous
 - For every $K \subset U$ compact, $\exists N, C$ (independent of n) s.t. $|\langle u_n, \phi \rangle|, |\langle u, \phi \rangle| \leq C \sum_{|\alpha| \leq N} \sup_{x \in K} |D^\alpha \phi(x)|$
 - If $\phi_n \rightarrow \phi$ in $C_0^\infty(U)$, then $\lim_{n \rightarrow \infty} \langle u_n, \phi \rangle = \langle u, \phi \rangle$
 - To check that u is continuous, can instead try to check for existence of $\langle u_n, \phi \rangle$ for each $\phi \in C_0^\infty(U)$.
 - $\lim_{n \rightarrow \infty} \langle u_n, \phi_n \rangle = \langle \lim_{n \rightarrow \infty} u_n, \lim_{n \rightarrow \infty} \phi_n \rangle$
- [Malgrange-Ehrenpreis] Every constant coefficient scalar linear partial differential operator has a fundamental solution.

Tricks

- Given a good function $h(x)$, consider $h_\delta(x) = h\left(\frac{x}{\delta}\right)$

Laplace Equation

Definitions
<ul style="list-style-type: none"> [Laplace Equation] $-\Delta u = 0$ [Fundamental Solution] Let \mathcal{P} be an operator and $y \in \mathbb{R}^d$. The <u>fundamental solution</u> E_y for \mathcal{P} at y is a distribution $E_y \in \mathcal{D}'(U)$ satisfying $\mathcal{P}E_y = \delta_y$.
Properties
<ul style="list-style-type: none"> [Translation Invariance] $-\Delta(u(x - x_0)) = (-\Delta u)(x - x_0)$ [Rotational Invariance] Given $O^T O = \mathbb{I}_d$, then $-\Delta(u(Ox)) = (-\Delta u)(Ox)$ [Homogeneity] For $\lambda > 0$, $-\Delta(u(\lambda x)) = \lambda^2(-\Delta u)(\lambda x)$ $f(x) = \lim_{\epsilon \rightarrow 0} \int f(y) \phi_\epsilon(x - y) dy = \lim_{\epsilon \rightarrow 0} (f * \phi_\epsilon)(x)$
Results
<ul style="list-style-type: none"> [Fundamental Solution] $E_0(r) = \begin{cases} -\frac{1}{2\pi} \log r, & d = 2 \\ \frac{1}{d(d-2)\alpha(d)r^{d-2}}, & d \geq 3 \end{cases}$ <ul style="list-style-type: none"> $E_0(r)$ is locally integrable near 0 i.e. is a distribution $-\Delta E_0 = \delta_0$ in \mathbb{R}^d [Solution] A solution for $-\Delta u = f$ on \mathbb{R}^d is $u = f * E$ [Uniqueness] If $u \in C_0^\infty(\mathbb{R}^d)$, then $u = (-\Delta u) * E$ i.e. u can be recovered from the Laplacian by convolving with the fundamental solution [Regularity] If $-\Delta u = 0$ and $u \in \mathcal{D}'(U)$, then u is smooth

Exam**Checks**

- When using method of characteristics, make sure to specify the region, usually apparent from where you can invert $(y, s) \rightarrow (x, t)$
- If stuck, differentiate termwise i.e. $\frac{\partial f}{\partial p_j}$ for example instead of $\nabla_p f$
- [Jacobian] $J = \begin{bmatrix} \frac{\partial f_1}{\partial x_1} & \dots & \frac{\partial f_1}{\partial x_n} \\ \vdots & \ddots & \vdots \\ \frac{\partial f_m}{\partial x_1} & \dots & \frac{\partial f_m}{\partial x_n} \end{bmatrix}$
- For test functions, consider Caratheodory functions.
- A strategy is to first use intuition, then patch up the proof with analysis. Many tricks with Caratheodory function.
- [Cutoff] For $\phi \in C_0^\infty(\mathbb{R})$, the cutoff function is $\chi(x) = \begin{cases} 1, & x \in \text{supp } \phi \\ 0, & x \notin \text{supp } \phi \end{cases}$
- [Fubini] If $\int_{\mathbb{R}^2} |f(x, y)| dx dy < \infty$, then $\int_{\mathbb{R}} \int_{\mathbb{R}} f(x, y) dx dy = \int_{\mathbb{R}} \int_{\mathbb{R}} f(x, y) dy dx$
- There is a cosine irregular function in HW 4. Find it!
- Check that the term defined is actually a distribution.
- There is a lot of intuition – just use intuition.
 - Derivative of distribution is just the intuitive derivative with delta boosts
- Can you guess the solution?
- Whack – every second should be used to think / compute something
- Don't worry – either win or learn, both are precious
- $\phi_n = \frac{1}{n^{2N}} \cos(2\pi n^2 x) \chi\left((n+1)^2 \left(x - \frac{1}{n}\right)\right)$
 - $\chi(x) = 1_{\left(-\frac{1}{2}, \frac{1}{2}\right)}$ and 0 outside $[-1, 1]$ smooth cutoff
 - $\text{supp } \chi\left((n+1)^2 \left(x - \frac{1}{n}\right)\right) \subset \left(\frac{1}{n+1}, \frac{1}{n-1}\right)$
 - $\sum_{\alpha: |\alpha| \leq N} \sup_{x \in K} |\partial^\alpha \phi(x)| < C_N$
